#### **EDUCATION**

## **University of Waterloo**

Waterloo, Canada

Bachelor of Computer Science

Sep 2020 - Apr 2026

- Relevant Coursework: Data Structures, Algorithms, OOP (C++), Operating Systems, CPU Architecture
- Awarded President's Scholarship of \$2000

### **EXPERIENCE**

**Software Engineer** 

May 2025 - Aug 2025

Meta Bellevue, USA

• Implemented 3 user interfaces within Meta Pay, written in **Hack**, centralizing customer receipts from Facebook, Instagram, and Reality Labs into 1 experience, increasing user engagement by **70**%

- Created a transformer in PHP, allowing customer receipts to be accessible from any of Meta's consumer apps, increasing user satisfaction by 80%
- Designed and developed **3 GraphQL APIs** which normalize receipt types from **29 product teams**, enabling engineers to fetch user transactions with a standardized schema
- Architected and shipped asynchronously triggered actions to filter user transactions, optimizing API usage by 4x

## **Software Engineer**

May 2024 - Aug 2024

Wealthsimple

Toronto, Canada

- Spearheaded the product development of a feature written in **Ruby** and **Typescript** that uses **SMS** as a new channel to concurrently notify more than **4 million clients** for marketing promotions, achieving **98.63**% user satisfaction
- Developed a fallback solution with **Ruby on Rails** to **reroute push notifications** as emails in the case 3rd party vendors are having an outage, ensuring clients are always notified of critical events
- Created a clawback feature in **Ruby** for customer support to manually track and undo automated events upon client request, decreasing CX toil by **60**%
- Optimized the **Postgres** notifications database by indexing frequently used data, decreasing latency by **45**% during busy periods of the stock market

# **Software Engineer**

Jan 2023 - Dec 2023

Intuit

Toronto, Canada

- Architected and developed **5 API endpoints** written in **Python** to increase performance by **5x** by periodically fetching and storing translated data using **Celery** from WorldServer to a **PostgreSQL** database
- Programmed a draft feature within a microservice written in **TypeScript** for users to save content in an **AWS SNS queue** before publishing, using **Splunk** for querying and **Jenkins** to assess pipelined integration tests
- Designed and deployed a **health check endpoint** to monitor a **7-part microservice** architecture, which updates the system's status every 30 minutes and posts logs on **Splunk**

## **Full Stack Developer**

Jan 2022 – Apr 2022

**Flybits** 

Toronto, Canada

- Created a modern UI with React and Typescript that marketers in banks and other financial institutions (TD, Mastercard, etc.) use to automate notifications and content to their customers, increasing engagement by 2.5x
- Improved and refactored back end services written in **Go** which send and receive requests to trigger push notifications to mobile devices

## **Cloud Consulting Software Developer**

May 2021 – Aug 2021

Deloitte

Toronto, Canada

- Deployed over **300 applications** onto cloud platforms such as **Google Cloud Platform** and **Azure**, saving clients **\$400k over 3 years**
- Developed a maintenance task in **Python** to detect developers' work patterns with their movement and activity, increasing **work efficiency by 20**%

## **PROJECTS**

Barista Bot — Intuit Hackathon | Python, Flask, OpenAI API, React, Typescript, Node.js

• Coded a Slack bot which uses OpenAI's ChatGPT-4 to interact and collect beverage orders from employees

i4Noi — McHacks7 – 3rd Place | Python, Google Assistant, Vision AI, Raspberry Pi

• Built an **IoT** product that aids the visually impaired by alerting surroundings with ultrasonic sensors and won **3rd** place among 500+ participants

## TECHNICAL SKILLS

**Languages**: TypeScript (TS), JavaScript (JS), Python, C++, Ruby, SQL, Java, Hack, C#, C, R, Go (Golang), HTML, CSS **Tools / Frameworks**: Git, React, Node.js, Datadog, Ruby on Rails, Redis, Django, Postman, AWS, PostgreSQL, Flask, Splunk, Firebase, Jenkins, Celery, Vision AI, OpenCV
